

INOVA Fairfax Hospital
Fairfax, VA

POLYHEME COMMUNITY MEETING FEEDBACK FORM

Please circle your answers

1. Would you support conducting a study such as the one described in this community meeting, specifically, a study in which severely injured and bleeding patients would be enrolled without giving their informed consent?

☒ Yes

☐ No

2. If you were severely injured and bleeding and were being treated by the paramedics in your community, would you want to be enrolled in this type of study?

☐ Yes

☒ No

3. If a family member of yours were severely injured and bleeding and were to be treated by the paramedics, would you want him or her to be enrolled in this type of study?

☐ Yes

☒ No

4. Do you have any comments or concerns you wish to share with the investigators?

Age: 36

Ethnic background: African American

Gender: Male ☐ Female ☒

Thank you for your participation today.

Please call Arletta VanBreda at 703-504-3071 if you have any other questions.

FEEDBACK FORM

Download and save this Microsoft Word document. Fill out the document, and e-mail it to Arletta.vanbreda@inova.com.

1. Would you support conducting a study such as the one described in this community, specifically, a study in which severely injured and bleeding patients would be enrolled without giving their informed consent? (Type Yes or No in the space below)

YES

2. If you were severely injured and bleeding and were being treated by the paramedics in your community, would you want to be enrolled in this type of study? (Type Yes or No in the space below)

YES

3. If a family member of yours were severely injured and bleeding and were to be treated by the paramedics, would you want him or her to be enrolled in this type of study? (Type Yes or No in the space below)

YES

4. Do you have any comments or concerns you wish to share with the investigators?

Age: 50 Ethnic background: Caucasian

Gender: Male Female X

Thank you for your participation today.
Please call Arletta VanBreda at **703-504-3071** if you have any other questions.

FEEDBACK FORM

§ 50.24 Exception from informed consent requirements for emergency research.

(a) The Institutional Review Board (IRB) responsible for the review, approval, and continuing review of the clinical investigation described in this section may approve that investigation without requiring that informed consent of all research subjects be obtained if the IRB (with the concurrence of a licensed physician who is a member of or consultant to the IRB and who is not otherwise participating in the clinical investigation) finds and documents each of the following.

1. The human subjects are in a life-threatening situation, available treatments are unproven or unsatisfactory, and the collection of valid scientific evidence, which may include evidence obtained through randomized placebo-controlled investigations, is necessary to determine the safety and effectiveness of particular interventions.
2. Obtaining informed consent is not feasible because:
 - i. The subjects will not be able to give their informed consent as a result of their medical condition;
 - ii. The intervention under investigation must be administered before consent from the subjects legally authorized representatives is feasible; and
 - iii. There is no reasonable way to identify prospectively the individuals likely to become eligible for participation in the clinical investigation.
3. Participation in the research holds out the prospect of direct benefit to the subjects because:
 - i. Subjects are facing a life-threatening situation that necessitates intervention;
 - ii. Appropriate animal or other preclinical studies have been conducted, and the information derived from those studies and related evidence support the potential for the intervention to provide a direct benefit to the individual subjects; and
 - iii. Risks associated with the investigation are reasonable in relation to what is known about the medical condition of the potential class of subjects, the risks and benefits of standard therapy, if any, and what is known about the risks and benefits of the proposed intervention or activity.
4. The clinical investigation could not practicably be carried out without the waiver.
5. The proposed investigational plan defines the length of the potential therapeutic window based on scientific evidence, and the investigator has committed to attempting to contact a legally authorized representative for each subject within that window of time and, if feasible, asking the legally authorized representative contacted for consent within that window rather than proceeding without consent. The investigator will summarize efforts made to contact legally authorized representatives and make this information available to the IRB at the time of continuing review.
6. The IRB has reviewed and approved informed consent procedures and an informed consent document consistent with § 50.25. These procedures and the informed consent document are to be used with subjects or their legally authorized representatives in situations where use of such procedures and documents is feasible. The IRB has reviewed and approved procedures and information to be used when providing an opportunity for a family member to object to a subject's participation in the clinical investigation consistent with paragraph (a)(7)(v) of this section.
7. Additional protections of the rights and welfare of the subjects will be provided including, at least:
 - i. Consultation (including, where appropriate, consultation carried out by the IRB) with representatives of the communities in which the clinical investigation will be conducted and from which the subjects will be drawn;
 - ii. Public disclosure to the communities in which the clinical investigation will be conducted and from which the subjects will be drawn, prior to initiation of the clinical investigation, of plans for the investigation and its risks and expected benefits;

- iii. Public disclosure of sufficient information following completion of the clinical investigation to apprise the community and researchers of the study, including the demographic characteristics of the research population, and its results;
 - iv. Establishment of an independent data monitoring committee to exercise oversight of the clinical investigation; and
 - v. If obtaining informed consent is not feasible and a legally authorized representative is not reasonably available, the investigator has committed, if feasible, to attempting to contact within the therapeutic window the subject's family member who is not a legally authorized representative, and asking whether he or she objects to the subject's participation in the clinical investigation. The investigator will summarize efforts made to contact family members and make this information available to the IRB at the time of continuing review.
- (b) The IRB is responsible for ensuring that procedures are in place to inform, at the earliest feasible opportunity, each subject, or if the subject remains incapacitated, a legally authorized representative of the subject, or if such a representative is not reasonably available, a family member, of the subject's inclusion in the clinical investigation, the details of the investigation and other information contained in the informed consent document. The IRB shall also ensure that there is a procedure to inform the subject, or if the subject remains incapacitated, a legally authorized representative of the subject, or if such a representative is not reasonably available, a family member, that he or she may discontinue the subject's participation at any time without penalty or loss of benefits to which the subject is otherwise entitled. If a legally authorized representative or family member is told about the clinical investigation and the subject's condition improves, the subject is also to be informed as soon as feasible. If a subject is entered into a clinical investigation with waived consent and the subject dies before a legally authorized representative or family member can be contacted, information about the clinical investigation is to be provided to the subject's legally authorized representative or family member, if feasible.
 - (c) The IRB determinations required by paragraph (a) of this section and the documentation required by paragraph (e) of this section are to be retained by the IRB for at least 3 years after completion of the clinical investigation, and the records shall be accessible for inspection and copying by FDA in accordance with § 56.115(b) of this chapter.
 - (d) Protocols involving an exception to the informed consent requirement under this section must be performed under a separate investigational new drug application (IND) or investigational device exemption (IDE) that clearly identifies such protocols and protocols that may include subjects who are unable to consent. The submission of these protocols in a separate IND/IDE is required even if an IND for the same drug product or an IDE for the same device already exists. Applications for investigations under this section may not be submitted as amendments under §§ 312.30 or 812.35 of this chapter.
 - (e) If an IRB determines that it cannot approve a clinical investigation because the investigation does not meet the criteria in the exception provided under paragraph (a) of this section or because of other relevant ethical concerns, the IRB must document its findings and provide these findings promptly in writing to the clinical investigator and to the sponsor of the clinical investigation. The sponsor of the clinical investigation must promptly disclose this information to FDA and to the sponsor's clinical investigator who are participating or are asked to participate in this or a substantially equivalent clinical investigation of the sponsor, and to other IRB's that have been, or are, asked to review this or a substantially equivalent investigation by that sponsor.

QUESTIONS AND ANSWERS POLYHEME® TRAUMA TRIAL

Why is this study being conducted?

To evaluate the life-saving potential of PolyHeme® when given to severely injured patients and bleeding patients, starting at the scene of injury

What is the title of this study?

A Phase III, Randomized, Controlled, Open-Label, Multicenter, Parallel Group Study Using Provisions for Exception from Informed Consent Requirements Designed to Evaluate the Safety and Efficacy of Poly SFH-P Injection [Polymerized Human Hemoglobin (Pyridoxylated) PolyHeme®] When Used to Treat Patients in Hemorrhagic Shock Following Traumatic Injuries Beginning in the Prehospital Setting

What is the design of this study?

Patients in "hemorrhagic shock" will begin to receive either the standard of care (salt water) (control) or PolyHeme (investigational treatment). Treatment would begin before arrival at the hospital, either at the scene of the injury or in the ambulance, and continue during a 12-hour postinjury period in the hospital.

In the hospital, patients in the control group will receive salt water for hydration and blood if necessary to boost oxygen levels. Unlimited doses of each are allowed.

Patients in the treatment group will receive salt water for hydration and PolyHeme® to boost oxygen levels. The maximum dose of PolyHeme will be 6 units during first 12 hours. Blood will be used thereafter.

What is hemorrhagic shock?

*Hemorrhagic means the patient has experienced massive blood loss
Shock is a life-threatening condition that might include:*

- *Dangerously low blood pressure*
- *Internal organs don't receive enough oxygen and have difficulty functioning*
- *Might lead to death*

Why is there a need for improvement in the way trauma patients are treated now?

Trauma is the leading cause of death among Americans under the age of 45.

What is the current standard of care? How are trauma patients usually treated?

They are given saline solution (salt water) at the scene or in the ambulance. When they arrive at the hospital, they are given blood after typing and cross-matching is accomplished.

Who would be eligible for the study?

*Patients who have lost a large amount of blood and are in shock
Patients who are at least 18 years old
Patients who have sustained severe injuries*

Who would be excluded from the study?

*Women who are obviously pregnant
Patients with severe brain injuries
Patients who require CPR to maintain their heartbeat
Patients with "unsurvivable" injuries
Patients who are known to object to blood transfusions
Patients who are known to refuse resuscitation*

What is PolyHeme®?

PolyHeme® is an oxygen-carrying blood substitute made from human blood. PolyHeme® requires no cross matching, therefore it is immediately available and compatible with all blood types. PolyHeme® is highly purified to reduce the risk of viral disease transmission. It has an extended shelf life of over 12 months.

Is PolyHeme® safe?

In clinical trials to date, PolyHeme® has demonstrated no clinically relevant adverse effects.

Past studies have shown that PolyHeme® carries as much oxygen as blood, has not caused organ damage, keeps people alive who have lost all of their own blood, and can be infused up to two times a person's entire blood volume.

Has PolyHeme® been tested on humans before?

There have been 5 human clinical trials of PolyHeme®.

How many patients have been treated with PolyHeme®?

Over 300 patients have been treated, including patients in a hospital-based trauma trial.

What happened to them?

In the Phase II hospital trauma trial, PolyHeme® significantly increased survival compared with historical controls.

What is an exception from informed consent?

Regulations established by the Federal government, (21 Code of Federal Regulations 50.24) specifies the conditions under which an exception from informed consent so that in emergency situations, research can be carried out even when consent is not possible because of the nature and extent of the patient's injuries.

Why was such an exception granted in connection with this study?

Patients are in a life-threatening situation, available treatments are unproven or unsatisfactory, and the collection of valid scientific evidence is necessary to determine the safety and effectiveness of particular interventions.

Participating in the study has the prospect of direct benefit to the enrolled patients because:

- *Patients are in a life-threatening situation that necessitates intervention*
- *Previous studies demonstrate the potential to provide a direct benefit to enrolled patients*
- *Risks associated with the use of the PolyHeme® are reasonable in relation to what is known about the patients' medical condition, the risks and benefits of standard therapy, and the risks and benefits of the proposed intervention*

It is expected that patients will be unable to give informed consent because the extent of their injuries and the fact that they are in shock.

There won't be time to find and ask for consent from the patient's legally authorized representative (LAR) before beginning treatment.

Who grants such exceptions?

The U.S. Food and Drug Administration (FDA) under regulations called 21 Code of Federal Regulations 50.24 specifies the conditions under which an exception from informed consent may be obtained. The Institutional Review Board (IRB) associated with each hospital approves its use locally.

What if patients don't want to participate in this study?

Patients can withdraw from the study at any time by notifying the investigator.

Will patients still receive treatment if they don't want to participate in this study?

Patients will still receive the standard of care if they decline to participate in this study.

What are the potential benefits of participating in the study?

PolyHeme® may increase the likelihood of survival after traumatic injury.

Patients might avoid the risks of blood transfusion.

Patients might avoid a reduction in the function of internal organs that sometimes follows blood transfusion.

This study may help patients in the future.

What are the potential risks of participating in the study?

Rash

Increased blood pressure

Kidney or liver damage

Transmission of hepatitis and HIV viruses

Unforeseen happenings

How much will it cost patients to participate?

There is no charge to the patient to participate in this study. The study sponsor will pay the costs of certain laboratory tests that are required.

Will patients get paid to participate?

No, patients will not be paid to participate in this study.

Who is the manufacturer of PolyHeme®?

Northfield Laboratories Inc., Evanston, IL. For more information, visit www.northfieldlabs.com

Study Purpose

*To evaluate the life-saving potential of
PolyHeme®
when given to severely injured
and bleeding patients in
"hemorrhagic shock," starting at the
scene of injury*

What is Hemorrhagic Shock?

Hemorrhagic: massive loss of blood

Shock: life-threatening condition

- Dangerously low blood pressure
- Internal organs don't receive enough oxygen and have difficulty functioning
- Might lead to death

Need for Improved Outcome

- The Center for Disease Control (CDC) lists trauma as the leading cause of death among Americans under age 45
- Thousands of trauma patients die each year
- Many of these patients die because the "standard of care" cannot reverse the damaging effects of hemorrhagic shock

What is the Standard of Care?

Represents the current treatment

In the Ambulance

The patient receives
salt water
(blood is not available)

In the Hospital

The patient receives
salt water
and donated blood

Standard of Care Limitations

In the Ambulance

- Salt water does not carry oxygen, unlike blood
- Without enough oxygen, the body and its internal organs have difficulty functioning and can stop working (organ failure)

Standard of Care Limitations

In the Hospital

- Donated blood takes time (45-60 minutes) to be matched for each patient
- Patients who receive more than 6 units of donated blood in the first 12 hours have an increased risk of organ failure

What is PolyHeme®?

*A blood substitute
that carries oxygen*

1 unit of PolyHeme
= 1 unit of blood

What is PolyHeme®?

- Made from human blood
- Compatible with all blood types
- Immediately available
- Reduced risk of viral disease (viral load reduced over a billion times)

Why Use PolyHeme®?

- PolyHeme was developed to treat blood loss when blood is not available
 - Blood is not available in the ambulance
 - PolyHeme will be immediately available in the ambulance and carries oxygen
- PolyHeme can reduce the use of donated blood in the first 12 hours after injury, and might avoid potential organ failure

Why Use PolyHeme®?

*To improve survival
of severely injured and bleeding
patients*

PolyHeme® Experience

- PolyHeme has been studied in more than 300 individuals and 5 different clinical trials
- PolyHeme has been extensively studied in hospitalized trauma patients
- *PolyHeme has kept trauma patients alive when they have lost all of their own blood*

PolyHeme® Experience

Past studies have shown that PolyHeme

- Carries as much oxygen as blood
(1 unit of PolyHeme = 1 unit of blood)
- Reduces need for donated blood
- Has not caused organ damage
- Has replaced up to two times a person's entire blood volume (2 x 10 units = 20 units)

Trial Design: Before the Hospital

Severely injured trauma patients will be assigned to either one of two groups by chance

Ambulance Infusion

Trial Design: At the Hospital

Control

- Salt water for hydration
- Donated blood to boost oxygen levels

Test

- Salt water for hydration
- PolyHeme® to boost oxygen levels
- Maximum dose of 6 units during first 12 hours
- Donated blood will be used thereafter

Hospital Infusion

Who Would Be Included?

Patients at risk of dying

- Who have sustained severe injuries
- Who have lost a large amount of blood and are in shock
- Who are at least 18 years old
- Who are of either gender (male or female)

Who Would Be Excluded?

- | | |
|---|--|
| • Patients who are obviously pregnant | • Patients who require CPR |
| • Patients who have severe head or brain injuries | • Patients with known objections to blood transfusions |
| • Patients who have "unsurvivable" injuries | • Patients with known orders not to resuscitate |

FDA Review

- Northfield Laboratories received clearance to proceed with this study from the Food and Drug Administration (FDA)
- The FDA authorized the use of an exception from informed consent requirements for this study

What is Informed Consent?

A process by which patients make informed decisions about participating in research studies

- Traditionally required for all research studies
- Research studies compare 2 treatments (standard vs. investigational)
- Doctors describe each of these potential treatments

What is Informed Consent?

A process by which patients make informed decisions about participating in research studies

- Patients are informed of the potential risks and potential benefits associated with each of these treatments
- Patients choose whether to participate in the study

What is Exception from Informed Consent?

Patients are enrolled in a research study without giving their informed consent

How Can That Be?

A federal regulation (21 CFR 50.24), created in 1996, allows certain studies that meet the following criteria to use this exception

- *Patients' lives must be at risk*
- Available treatments are not satisfactory
- Patients are unable to give consent
- Potential risks are reasonable

How Can That Be?

A federal regulation (21 CFR 50.24), created in 1996, allows certain studies that meet the following criteria to use this exception

- Participation in the research could provide a direct benefit (*increased survival*) to the patient
- The research could not be practicably carried out without an exemption

Consent Safeguards

- If possible, the patient or a legally authorized representative (LAR) can give consent before the patient is enrolled in the study
- If consent cannot be obtained before enrollment, frequent attempts will be made to contact the patient's LAR and family to describe the study

Consent Safeguards

*The patient, family members,
or a legally authorized representative
may decide to withdraw the patient
at any time*

Potential Benefits of PolyHeme®

- *Might increase the likelihood of survival*
- Can enhance the amount of vital oxygen in the patient's blood
- Is compatible with all blood types
- Is immediately available
- Has reduced risk of viral disease (viral load reduced over a billion times)

Potential Risks of PolyHeme®

- Rash
- Increased blood pressure
- Kidney or liver damage
- Viral infection (HIV, hepatitis, etc.)
- Unforeseen happenings

Patient Protection

The Institutional Review Board (IRB) is a group of medical, scientific, and nonscientific members of the community

- Reviews all proposals for research on humans
- Assures patient safety
- Monitors community feedback

Patient Protection

- The IRB will decide whether or not to allow this hospital to participate in the PolyHeme® trial
- An independent data monitoring committee will oversee the trial
- The FDA will be kept informed of the trial's progress

If We Participate...

- The results of the study will be revealed to the community after the trial has been completed
- Those who do not want to participate in the study can [wear a special bracelet] to exclude themselves

Questions
or
Comments?

Letter to physician

Dear:

I am writing to inform you about a research study that may be conducted at Inova Fairfax Hospital.

Inova Fairfax Hospital is one of few Level I trauma centers in the U.S. chosen to participate in a research study to evaluate the safety and efficacy of PolyHeme®, an oxygen-carrying blood substitute, in increasing survival of critically injured and bleeding patients. Study treatment will begin before arrival at the hospital, either at the scene of the injury or in the ambulance, and continue during the initial 12-hour post-injury period in the hospital. Since blood is not presently carried in ambulances, the use of PolyHeme® in these settings has the potential to address a critical unmet medical need by providing an oxygen-carrying solution where blood is currently not available. The study will compare the survival rate of patients receiving PolyHeme® to that of patients who receive the current standard of care, which is saline (salt-water) solution.

Because the patients eligible for this study are unlikely to be able to provide prospective informed consent due to the extent and nature of their injuries, the study will be conducted under federal regulations that allow for clinical research in emergency settings using an exception from the requirement for informed consent (21 CFR 50.24).

Research at Inova Fairfax Hospital is overseen by the Western Institutional Review Board (WIRB). WIRB is a group of people who perform independent review of research. The traditional approval of a research study includes a requirement that informed consent be obtained from patients before enrollment can occur. Under the current regulations, the institutional review board responsible for the review, approval and continuing monitoring of a research study may give approval for patient enrollment in studies in emergency situations without requiring informed consent provided specific criteria are met. The patients must be in a life-threatening situation, and the experimental therapy being evaluated must offer patients the potential for direct clinical benefit in the form of increased survival.

Before enrollment can begin, the regulations require public disclosure of information about the study, including the potential risks and expected benefits. Consultation must also occur with representatives of the community where the study will be conducted and from which the study population will be drawn. The process is highly individualized and is tailored to the specific community and patient population involved. Our institution is beginning this process now. The purpose of this letter is to provide you with background information about this study.

PolyHeme®, manufactured by Northfield Laboratories Inc. of Evanston, Illinois, is a universally compatible, immediately available, oxygen-carrying blood substitute designed for use in urgent blood loss when blood is not immediately available. Northfield Laboratories has completed five human research studies over the past decade.

In addition, Northfield is currently working with the U.S. Army for research purposes for use of PolyHeme on the battlefield, reflecting the potential utility of PolyHeme for the military and the Department of Defense.

We are excited to be included in this research study. Trauma-related injuries are a leading cause of death among Americans under 45 years old, according to the CDC's National Center for Injury Prevention and Control. In fact, almost one in five trauma patients nationally die from their injuries. We believe that if we can begin to treat these patients very early with an oxygen-carrying solution and keep their hemoglobin levels up, we might well see more survivors among trauma victims in our community.

Please feel free to contact me directly should you wish to discuss this study and the implications for our community. Please join the Inova Research Center and Inova Trauma Services in the Physician's Conference Center on the campus of Inova Fairfax Hospital on Monday, March 7th, Tuesday, March 15th or Tuesday, March 22nd to learn more about this research study. All meetings begin at 7:00 pm. Please also visit our web site at www.inova.org and look for the PolyHeme Trial under either Inova News or Health Information.

I can be reached by calling 703-504-3071. In advanced I thank you for your interest and time.

If you do not wish to receive future mailings from Inova Health System, please contact us at 703-321-2511.

Sincerely yours,

Samir M. Fakhry, M.D.
Principal Investigator

Subject: PolyHeme information

Hi Lisa - Mary Jane Oldham asked me to detail for you the many ways in which we have publicized your PolyHeme study and the accompanying community meetings. Working from the outside to the inside, the list includes:

- press release regarding community meetings
- press release regarding special news conference with Dr. Fahkry
- blurb in Management Update Weekly, repeated several times (Inova Management Team)
- blurb in all hospital newsletters, including Monday Rounds (IFH/IFHC/IHVI), Exchange (IAH), Exchange (IMVH), Oak Post (IFOH), repeated several times
- blurb in Checknotes (all employees)

As you can see, we have covered all of Inova's internal audiences multiple times, as well as the community via the press. If you have any other questions, or would like a sample of one of the above items to share with your board, please do not hesitate to contact me and I can provide one for you.

Subject: Inova in the news...

Be sure to watch your local news tonight on Channels 4, 5, and 9 for a story about a study in which the Inova Regional Trauma Center at Inova Fairfax Hospital will participate. The study will involve the use of PolyHeme, an investigational blood substitute used to treat severely injured and bleeding patients who are in shock.

Samir Fakhry, MD, chief, and Christopher Michetti, MD, trauma surgeon, Inova Regional Trauma Center at Inova Fairfax Hospital both spoke at a news conference explaining the study.

An additional story can be heard this afternoon on WAMU-FM Radio (88.5) between 4 and 6 p.m.

Inova Fairfax Hospital
PolyHeme® Trauma Study

Inova Fairfax Hospital, Fairfax, VA, is one of a few Level I trauma centers in the United States considering participation in a research study of an investigational, potentially life saving blood substitute for severely injured patients who are bleeding and in shock. This study uses a provision for an exemption from informed consent requirements in accordance with federal regulations (21CFR 50.24) since it is anticipated that patients will not be able to provide consent due to the nature and extent of their injuries. Patients, their legally authorized representative, or family member will be notified at the earliest opportunity of their inclusion and the details of the research study.

Community meetings will be held at Inova Fairfax Hospital, Physician Conference Center on March 7

March 15

March 22

At 7 PM for all members of the community who are interested in learning more about this study and to offer feedback to representatives of the Inova Fairfax Hospital.

For more information check the web @: at www.inova.org and look for the PolyHeme Trial under either Inova News or Health Information, or call Arletta van Breda, RN, 703 504 3071

Subject: PolyHeme Community Meetings

Hi All,

Please join the Inova Research Center and Trauma Services for a community meeting on Tuesday, March 15th to discuss the PolyHeme Trial. The meeting will begin at 7:00 pm in the Physician's Conference Center. Additional information about this trial can be found at www.inova.org under Health Information.

We look forward to seeing you all there and thank you for your support in advance.

COMMUNITY MEETINGS FOR CLINICAL TRIAL SCHEDULED

Inova Fairfax Hospital has been chosen to participate in a national clinical research study of PolyHeme®, an investigational oxygen-carrying blood substitute for trauma use. To comply with federal regulations, which permit this trial to be conducted without obtaining the informed consent of the patients enrolled, Inova Fairfax Hospital will hold three community meetings on **Monday, March 7th, Tuesday, March 15th, and Tuesday, March 22nd** all beginning at 7 p.m. in the Physician's Conference Center.

To learn more about this study, visit www.inova.org and look for the PolyHeme Trial under either Inova News or Health Information.

**INOVA FAIRFAX HOSPITAL INVITES THE PUBLIC TO ATTEND A
COMMUNITY MEETING TO DISCUSS THE RESEARCH STUDY OF AN
INVESTIGATIONAL BLOOD SUBSTITUTE IN TRAUMA PATIENTS
TO BE CONDUCTED IN OUR COMMUNITY**

Falls Church, VA-MONTH, DATE, YEAR --Trauma-related injuries are a leading cause of death in Americans under 45 years old, affecting more than 2 million persons annually. Nearly one in five trauma victims dies as a result of his/her injuries.

INOVA FAIRFAX HOSPITAL invites the public to attend community meetings at which members of its Trauma Service will explain the details of a national research study to evaluate an investigational blood substitute in severely injured and bleeding patients who are in shock. In this study, PolyHeme will be compared to the usual care. Study treatment would begin before arrival at the hospital, either at the scene of injury or in the ambulance, and continue through a 12-hour post injury period in the hospital. Only persons over 18 years of age who meet specific study criteria will be eligible for inclusion.

This research study is being conducted in accordance with federal regulations permitting an exception from informed consent requirements under 21 CFR 50.24. Samir Fakhry, M.D., will explain these regulations and the study protocol and the potential risks and benefits associated with participation. He will be available to answer questions. Your comments and concerns will be solicited and addressed.

The forum will take place on: March 7

March 15

March 22

In the Physician's Conference Center on the Inova Fairfax Campus at 7PM.

Please review our web page at www.inova.org and look for the PolyHeme Trial under either Inova News or Health Information for more information.

Members of the media are invited to cover this event.

Inova Regional Trauma Center at Inova Fairfax Hospital will hold several community meetings to hear details of the national research study.

This research is being conducted in accordance with federal regulations permitting an exception from informed consent requirements under 21 CFR 50.24. Samir Fakhry, MD, chief, Trauma and Critical Care Services, Inova Regional Trauma Center at Inova Fairfax Hospital, will explain these regulations and the study protocol, as well as the potential risks and benefits associated with participation.

Media may park in the Blue Parking Garage located across from the Physicians Conference Center.

Inova Health System is a not-for-profit health care system based in Northern Virginia that consists of hospitals and other health services including emergency and urgent care centers, home care, nursing homes, mental health and blood donor services, and wellness classes. Governed by a voluntary board of community members, Inova's mission is to provide quality care and improve the health of the diverse communities we serve.

#

	Do you support conducting a study such as the one described in this community, specifically, a study in which severely injured patients would be enrolled without their informed consent?	If you were severely injured and bleeding and were being treated by the paramedics in your community, would you want to be enrolled in this type of study?	If a family member of yours were severely injured and bleeding and would be treated by the paramedics, would you want him or her to be enrolled in this type of study?	Do you have any comments or concerns you wish to share with the investigators?	Age	Ethnic Background	Gender
